Nice To Meet

Hi, i'm Matan, 28 y/o.

From a very young age i remember myself a technological person.

When i was 10 i build my first HTML website and deployed it to the mythological Nana Website. In the following years until my army period i was 24/7 on the PC and was doing anything related to computers and gaining a lot of knowledge in this world.

At a certain time i decided to make my hobby into career, and started to learn web programming independently.

First, HTML and CSS, then i learned WordPress and Elementor inside-out, PHP and getting deeper and deeper to it.

in the past few months i'm participating in a full stack online live course from the basics in order to master my programming knowledge and expend it.

in this course we are learning : HTML, CSS, Javascript, Python, MongoDB, React, Flutter and Web Services.

i can tell that i am the most experienced student and therefor i have more understanding in this course so i am helping other students in Home work and stuff :)
